C/Complex: An Immunoglobulin beneficierramer subunit consists of two identical light (kaland disulfide bonds: In some cases, such as 1gA and 1gM, the subunits associate into 1 C/Superfamily: immunoglobulin C region; immunoglobulin homology
C/Keywords: alternative splicing; duplication; glycoprotein; heterotetramer; immunoglob
F/22-87/Domain: immunoglobulin homology < IM.>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       F)129-195/Domain: immunoglobulin homo.ogy <:M2>

The present invention describes a peptide (I) compising an isolated surface exposed group/epitope (EI) of C-epsilon 2 domain (3) of immunoglobulin E-1984, or its immorphy explosed area (i) an immunoglobulin E-1984, or its immorphy explication (I) (2) a vaccine (III) of intrading alloways compising (I) (2) a vaccine (III) of compising (II) (3) a ligand (IV) capable of recognising (IV) comparising (IV); (5) a period (IV) and (IV) of comparising (IV); (1) and (IV); (2) a peptide (I3) and (I) producing (II) (I) and munocupressive activities, and can be used as a vaccine and histamine release inhibitor. (II) and (III) are useful in medicine and in the manufacture of medicaments for treating as a vaccine and in the manufacture of medicaments for treating confidentifying in medicine and also in manufacture of medicaments for treating and preventing allowayses in distributing medicaments for treating allowayses (IV) is useful in diagnosines and in the affinity purification (C) of circulating and planet susceptible to or suffering from allergies. (CV) is also useful in diagnosing atopy. AAB2699 represent
                                                                                                                               Peptides useful for treating, preventing and ameliorating allergic diseases, comprising an isolated surface exposed group of a specific domain from immunoglobulin E.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human: Linkage technology; conjugated compound; carrier vehicle; epitope; Cepsilon2; Cepsilon3; Cepsilon4; immunoglobulin E; Igs mediated disease; antibody response.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes an immunogen (1, periodic) and a carrier (1b) derived from protein (1, derived) and influenced of this frament. Also described are (1) a vaccine implicits influenced of exciptions of the score of this frament, and and the vaccine of this fragment; and (3) preparation of a vaccine of 11, only protein (1) and the comprising (1) with an exciption (1), and the vaccine are useful for the manufacture of a waccine of 11, only the vaccine are useful for the manufacture of a medicarent for preventing and leading of decreases such as malaria or chronic diseases on all of the prioric of the manufacture of a medicarent for the vaccine are useful (1) induces figure of antipoptice of the protein of antipoptice of the protein of the process while inducing a moderate humoral response against the manufacture response swill as maderial expensive the manufacture of antipoptice of antipoptice of antipoptice of the present as specifically claimed manufacture (1) and the present invention.
                                                               Immunogens and vaccine comprising the immunogen useful for preventing and treating infectious diseases e.g. malaria and chronic disease e.g. cancer, comprises peptide and carrier from protein 1 of influenzae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             igs C epsilon is domain surface exposed epitope peptule Buiss, its Nitt
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Epitope, mimosope, human, immunosophilis B. 148. Thereis no thausing allerand disease, immunopiophylaxis, immunosipe gyour cities no immunosuppressive, vaccine, historiae recesse cities to the immunosuppressive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mass 11 S.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Landin A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  745.54

conjugation of encounts tegates to intrade meaning the international present international tegates. Deptices) to cattlet websides Conjugation of engineers, polymers, dendrimers, proteins to produce coloqueal and immunological constructs. The invention to produce a pharmaceutical composition of a vaccine. The rection for insert in a pharmaceutical composition of a vaccine. The composition of describes peptides derived from or mannership from the composition of Cepsilons of the compositions of the invention are useful in the mannership of compositions of the invention are useful in the mannership of a rediction of a protein so day to the treatment of IgE mediated diseases. The invention are useful in the mannership of a protein so as to form an immunogenic conjugate which may be able to risks a protective antibody response in an animal or human partern. The the Cepsilon2/Cepsilon3/Cepsilon4 region of furantily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The piesent invention relates to a composition compulsing allerly peptides linked by an inert carrier. The allerly peptides in derived from "monoglobulin B (198) or 198 receptor. The prison periods is one such peptide from 198. The composition is useful as a vacinity or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New vaccine comprising allergy peptides (insed by an ideal carrier, useful for boosting an anti-allergy immune response in an individual susceptible to an allergic response

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to conjugates suitable for use in vaccines, where the conjugate comprises a dissiphide bridge cyclised peptide and an immunogenic carrier. The vacines can be used in the treatment of allergies. The present sequence is a peptide immunogen derived from human immunoglobulin E (19E) suitable to be cyclised and used in the invention.
manufacturing a medicament for the prophylaxis or treatment of allergy. In particular, for boosting an anti-allergy immune response in an individual susceptible to an allergic response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                        Immunogen; human; IgE; immunoglobulin E; allergy; thio-ether linkage;

The present invention relates to inhage methodology for use in the conjugation of corpounds (e.g. peptides) to carrier vehicles

(e.g. macronoleouies, polymers, dendrimers, proteins) to produce to incloanced and immunological constructs. The invention provides a method for linking an epitope (e.g. a peptide) to a carrier (e.g. a protein; for use in a pharmaceutical composition or a vaccine. The invention describes peptides derived from or mirotopes of the composition of describes peptides derived from or mirotopes of the invention describes peptides derived from or mirotopes of the compositions of the invention are used to produce conjugated compounds. The compounds or compositions of in invention are used to produce ronjugated diseases. The invention allows for controlled conjugation of a peptide epitope (antigen) to a protein so as to form an immunogenic conjugate which may be able to raise a protective antibody response in an animal or human patient.

AAJ16622-AAJ16923 represent peptides derived from or mimospes of the Cepsilon2/Copsilon3/Cepsilon4 region of human 1gE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A linkage comprising an immunogenic conjugate useful treatment of IgE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                         Peptide P15t derived as mimotope of Cepsilon2 region of human 1gE

The present invention relates to computates suitable for use in vaccines, where the compudate comprises a discipline bridge cyclised paptide and an armunogenic carrier. The vaccines can be used in the treatment of allorgies. The present sequence is a peptide immunopen derived from human armunoglobulin B (19B) suitable to be cyclised and used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         lmmunoglobulin E, IgE, immunogenic, immunogen; Frotein D, carrier;

The present invention describes an immunogen (1) comprising a peptide (1a) and a carrier (1b) derived from protein D of Haemophius influenced or its fragment. Also described are: (1) a vaccine comprising (1), and an exiptent; (2) preparation of (1), comprising conjugating a peptide to protein D or its fragment; and (3) preparation of a vaccine of (1), and the vaccine of (1) with an excipient; (1) has cytostatic, antialisers, nootropic, neuroprotective and protozoacide activities. (1) and the vaccine are useful for the manufacture of a medicament for preventing and treating infectious diseases such as malaria or chronic disease such as cancer, Alzheimer's diseases such as malaria or chronic clinke prior art immunogens. (1) induces high levels of antipeptide carrier. The present sequence represents a specifically claimed carrier. The present sequence represents a specifically claimed minocope peptide sequence, which can be used in an immunogen of the

The present invention describes a peptide [1] comprising an isolated surface exposed group/epitope [81] of C-epsilon 2 domain [0] of immunodiobulin E (19E), or lise minotope. Also described are: 1) an immunodiobulin E (19E), or its minotope. Also described are: 1) an immunogen [11] for treating allergy comprising [1], [2] a vaccine [11] or treating allergy comprising [1], [3] a vaccine [11] or treating allergy comprising [1], [3] a vaccine [11] or producing [1], [4] a pharmaceutical composition [PC] comprising [1], [1] or producing [1], [1] or periodic [1] or producing [1], [1] or producing [1], [1] or producing [1], [1] or producing [1], [1] or can have antiallergy and immunosuppressive activities, and can be used as a vaccine and historian release inhibitor [1], [1] are useful in medicine and in the manufacture of medicaments for treating and preventing allergies. [1V] is useful for identifying minotopes of PI, [2] or defining anti-19E antibodies from blood. [1], [11] and PC are useful for treating a pation: sisceptible to or suffering from allergies. [1V] is also useful in diagnosing atopy. AABE5997 to AABE699 represent producing invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Peptides useful for treating, preventing and ameliorating allergic diseases, comprising an isolated surface exposed group of a specific domain from imminoglobulin E.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Epitope, mimotope, human, imminoqiobulin E; 19E; C-epsilon-2 domain, allergio disease, imminoprophylaxis, imminotherapy, antiallergio, imminosuppiessive, viccine, histamine release inhibitor, immunogen;

The present invention relates to tinkage methodology for use in the conjugation of compounds (e.g. peptides) to carrier vehicles

(e.g. macrobleoules, polymers, dendrimers, proteins) to produce biological constructs. The invention provides a protein of the produce of the protein of the provides a protein of the protein of the provides a protein for use in a pharmaceutical composition or a vaccine. The invention describes peptides derived from or mimotopes of the compounds or cepsilons, Cepsilons or the invention are useful in the manunoglobulin E (19E) which are used to produce conjugated compounds. The compounds or compositions of the invention are useful in the manufacture of a protein so as to form an immunogenic conjugate which may be able to protein so as to form an immunogenic conjugate which may be able to that 632-AAU16613 represent peptides derived from or mimotopes of the Capailon3/Copsiloni region of human 19E.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (i)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The present invention relates to innkage methodology for use in the conjugation of compounds (e.g. peptides to carrier whiches to conjugation of compounds (e.g. peptides to carrier whiches to biological conscious), printens, to priduce the project of the conjugation of constitutions in provides a project of invention provides a project of in a pharmaceutrol, compastion, or a variable. The invention describes peptides desired, compastion or a variable of the compositions of the invention are used to produce conjugate compastions of the invention are used to produce compasted compastions of the invention are used to produce compastion the maintaining of redicated to the invention are used to produce compasted finems in the maintaining of redicated to controlled conjugation of a jeptide epitite of the invention of a jeptide epitite of the transfer of a lower of inserts and the form an immunogenty occlusted which may be able to produce the analody response in an annual controlled conjugation of a jeptide epitide epitide epitide epitide epitide analogy is a profession.
                                                                                                                                                                                                                                                                                                                 A linkage comprising an immunogenio conjudate uspiul treatrent of 19E mediated diseases

Peptide PISG derived as mimotope of Pipsiloni Handon forman 1gE

Human, linkage technology, conjugated purpossible satisficity and objection of copilogy Cepsilon), Cepsilond, Cepsilond, Sepsilond, Sepsilond,

AD20-145745 A2

Ted.1 MCC #2

```
The present invention relates to innhage methodology for use in the conjugation of compounds (e.g. paptides) to carrier vehicles

(e.g. macronolecules, polymers, denderimens, proteins) to produce biological and immunological constructs. The invention provides a protein for use in a pharmaceutical composition or a vactime. The invention describes peptides derived from or minotopes of the invention describes peptides derived from or minotopes of the compositions. Cepsilons of the invention are used to produce conjugated compounds. The compounds or compositions of the invention are useful in the manufacture of a compositions of the invention are useful, in the manufacture of a protein so as to form an immunogenic conjugate which may be able to rise a profective antibody response in an animal or human patient. Adult632-Adult6913 teptesent peptides derived from or mimotopes of the Cepsilon2/Cepsilon3/Cepsilon4 region of human igE.
                                                                                                                                                                                                                                                                                           comprising an immunogenic conjugate useful treatment of 1gE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 . 0
